MatrixStream launches 1080P IPTV platform over 4G network

Monday 13 September 2010 | 08:29 CET

Embedded IPTV technology company MatrixStream Technologies has launched an IPTV platform, which can be used over LTE or Wimax network. The MatrixStream patent pending MatrixCast technology enables TV viewers on the 4G network to view live HD TV and VoD in 3D and in full HD 1080p with surround sound without buffering usually associated with videos viewed through the internet. MatrixStream's IPTV platform also supports enhanced IPTV features such as pause live TV, visual channel preview, DVR, targeted advertising, video on demand in 7.1 surround sound, games and other TV applications. MatrixStream IPTV is fully customisable, enabling the service provider using the MatrixStream TV API to develop more TV apps. Consumers can access the IPTV via a MX 1 HD set top box, or on a PC using the MX 1100 PC player. The MatrixStream IPTV platform is automated and self provisioning with the MX 1 supporting wireless.
